Renewable Energy in the News

Germany Just Got Almost All of Its Power From Renewable Energy

May 15, 2016

Bloomberg: <http://www.bloomberg.com/news/articles/2016-05-16/germany-just-got-almost-all-of-its-power-from-renewable-energy>

A large field of wind turbines is spread across rolling green hills. The turbines are white with three blades each, and they are densely packed in some areas, while more sparse in others. The hills are covered in lush green grass, and the sky is a clear, pale blue. The overall scene is a vast, open landscape dedicated to renewable energy.

Investment in renewables reached **\$286 billion** worldwide in 2015

BBC: <http://www.bbc.com/news/science-environment-36420750>

Introducing PowerStream

The background of the slide is a photograph of a wind farm. In the foreground, several wind turbines are silhouetted against a bright, cloudy sky. The turbines are tall, with three blades each. The sky is filled with soft, white clouds. The overall tone of the image is bright and airy, with a slight blue tint in the upper part of the sky.

MemSQL PowerStream

Predicting the global health of wind turbines

MemSQL PowerStream

197,000 wind turbines around the world

Wind Turbine

Wind Farm

1 to 2 million data points per second
with MemSQL *Streamliner*

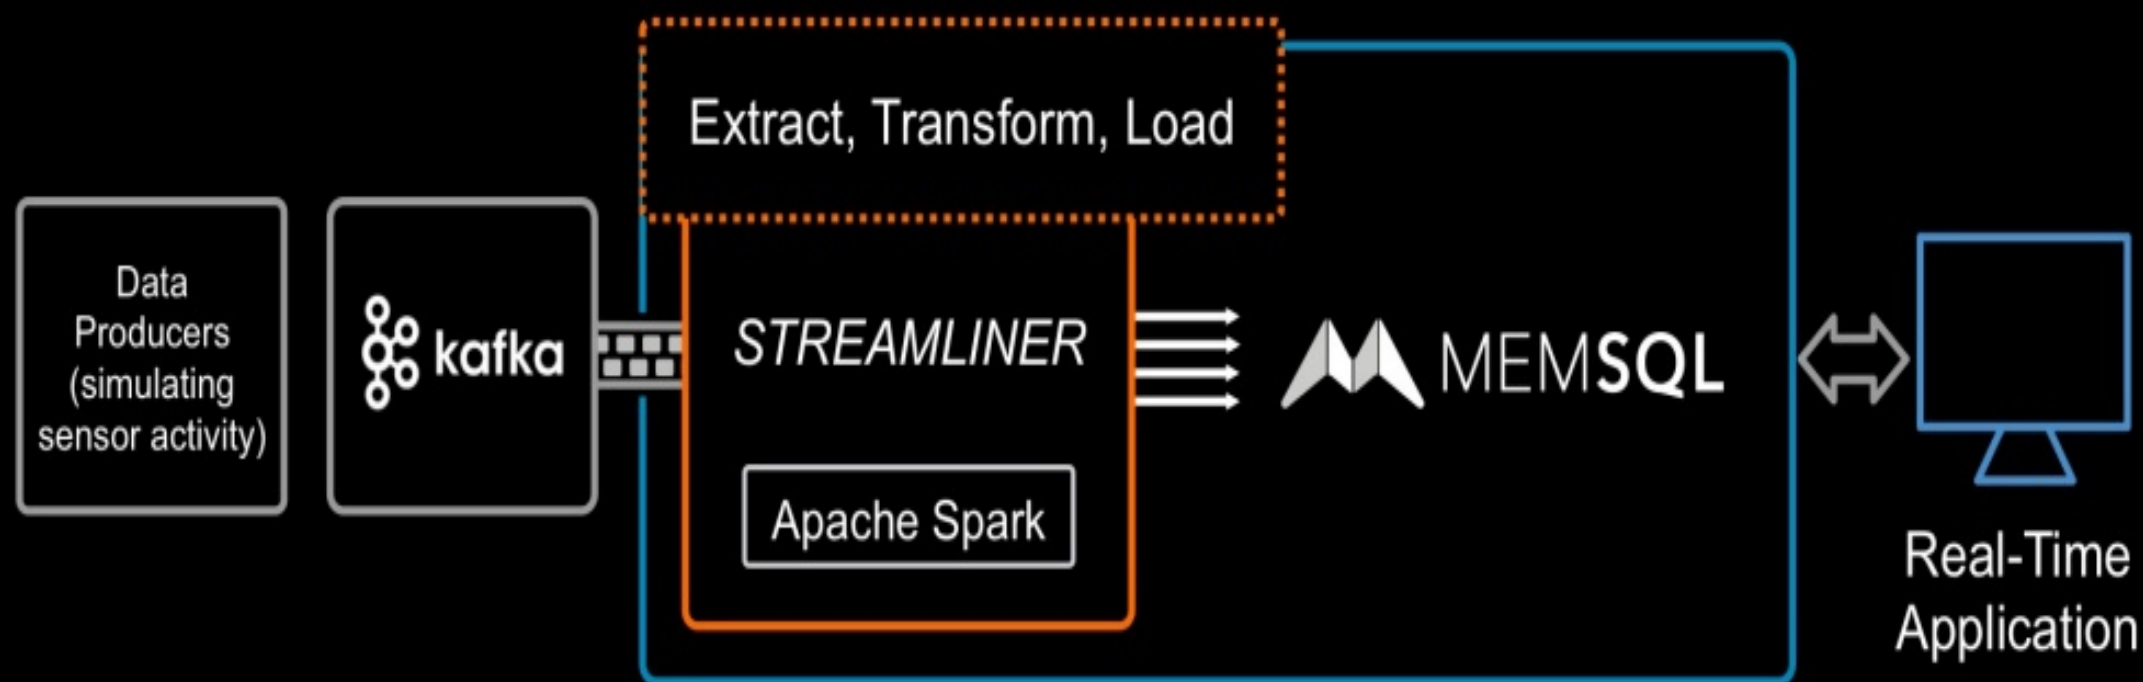

MemSQL PowerStream

Internet-of-Things simulation depicting health of wind turbines globally.

7 machines - AWS C4-2X large instances, at \$0.311 per hour per machine, annual cost ~ \$19,000.

Streamliner Architecture for PowerStream

Visualizing data from **2 million sensors** and **197,000 wind turbines** from around the world.
All data generated in real time by [MemSQL](#).

Demo Sequence

- Part I
 - High Speed Ingest
 - Predictive Analytics
 - Business Intelligence
- Part II
 - Spark SQL Pushdowns

MemSQL and Spark Real-time application

Demo part I

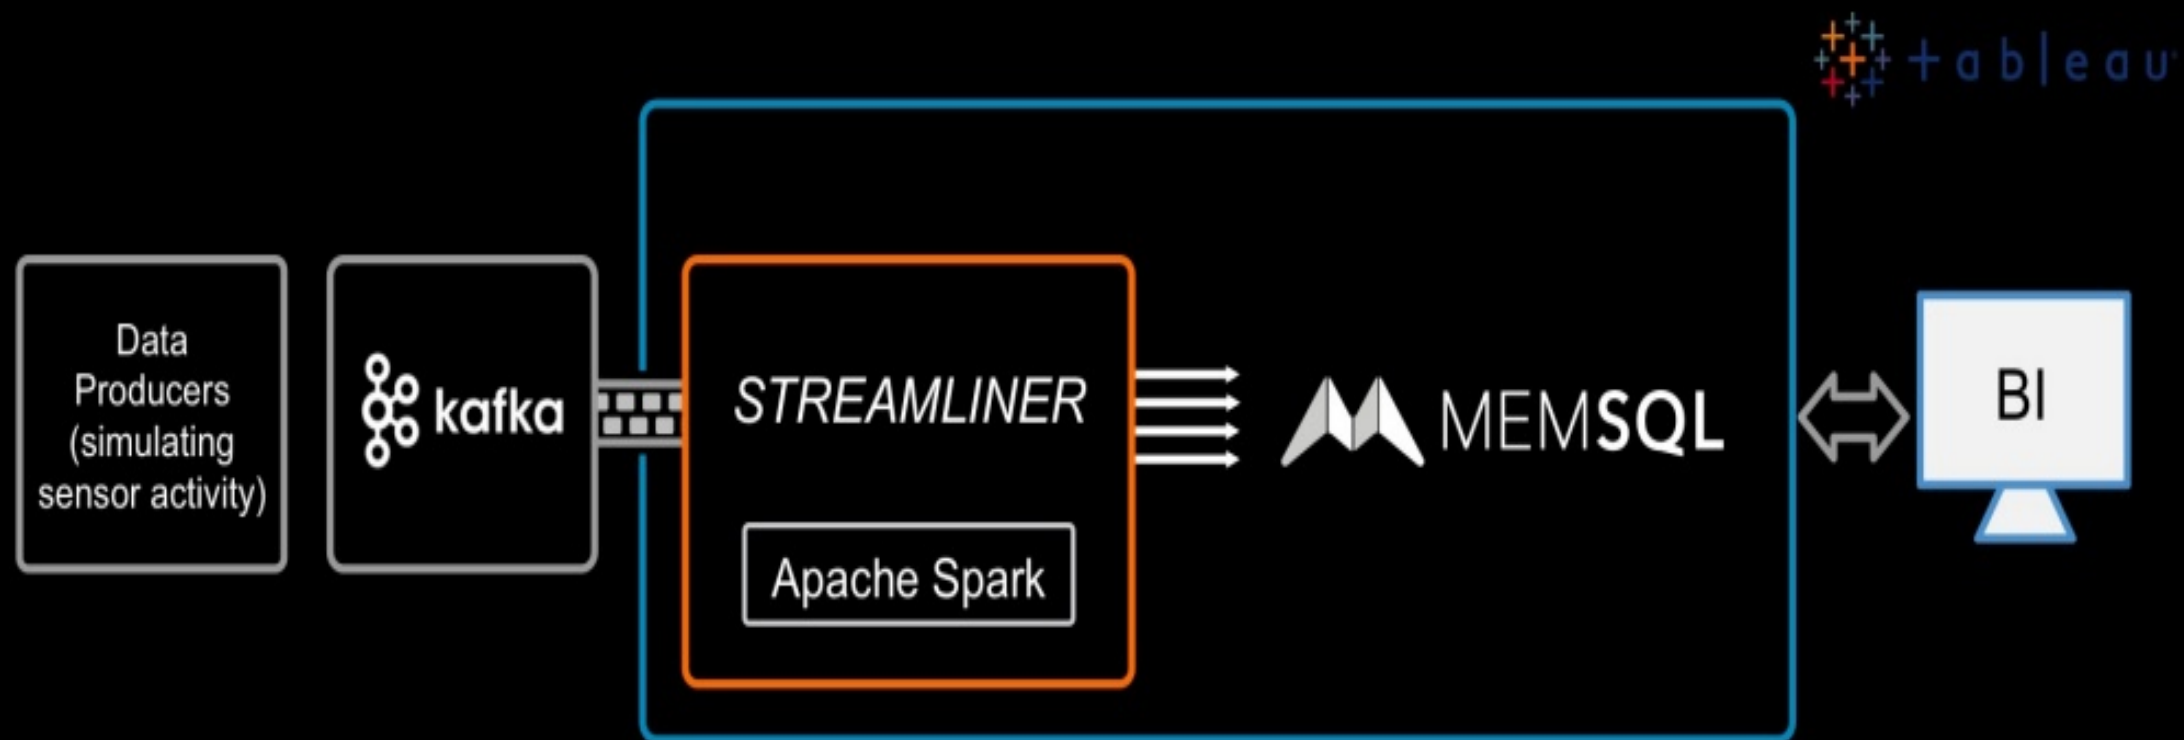

Classification

BLUE
Failure
Mechanical wear
Type 1

BLACK
training data for
turbine operating
normally

ORANGE
Failure
Mechanical wear
Type 2

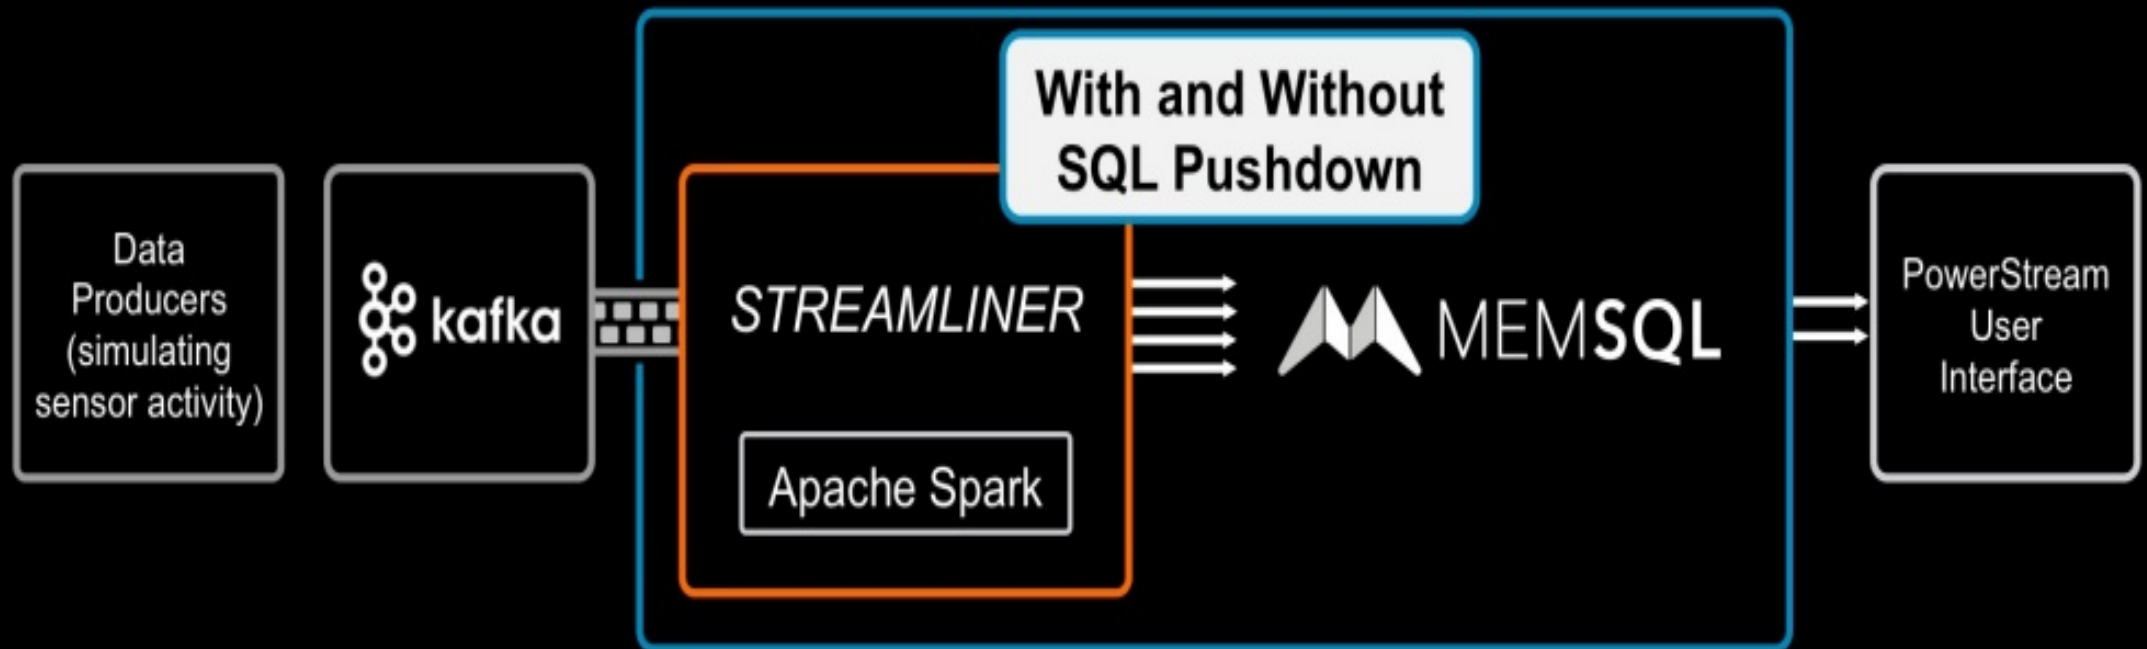

Demo Part I

MemSQL and Spark Better together

Demo part II

SQL Pushdown

- Delegate SQL query processing to a database
- Enhance speed and concurrency
- Complement other Spark capabilities
- Use Spark as a high level interface
- Command line example with and without pushdown

Demo Part II

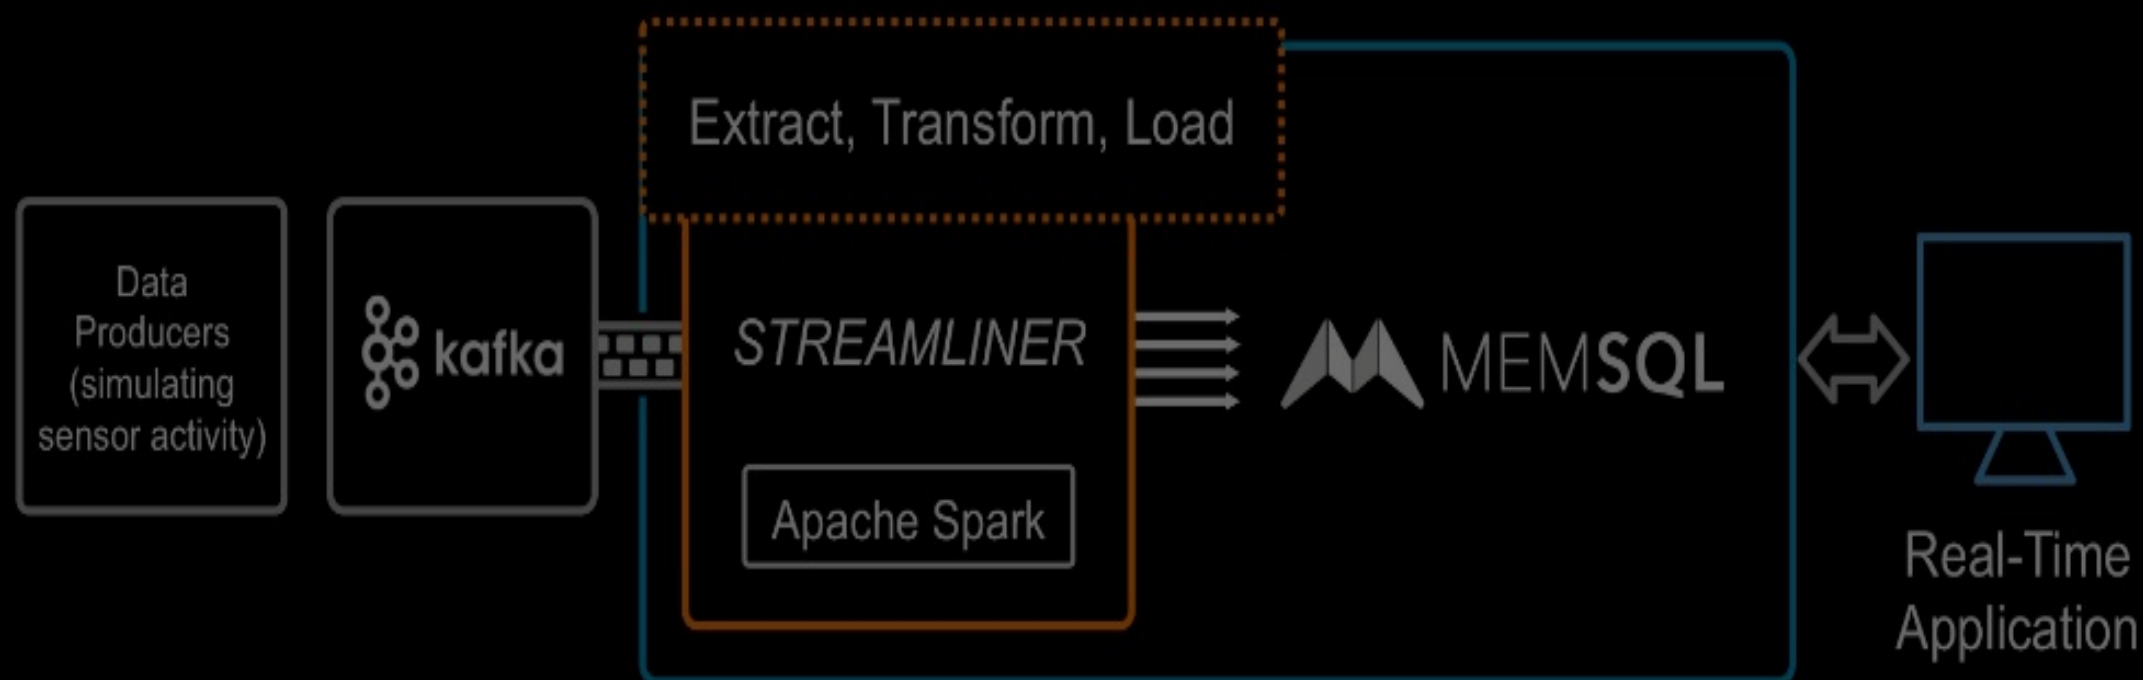

From a Real-Time Dashboard to Predictive Applications
